DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- Claims 1-9 are drawn to an antiseptic topical composition comprising one or more 2-(1H) pyridone compound(s), classified in class 514, subclass 315.
- II. Claims 10-18 are drawn to a method of treating bacteria, fungi, and/or viruses on the surface of or within the layers of the dermis of skin, ears, fingernails, toenails, or hoofs or mammalian species by applying to said surface one or more 2-(1H) pyridone compound(s), classified in class 514, subclass 315.

The two inventions are independent and distinct, each from the other as they have a separate status in the art as shown by their different and separate subject matter for inventive effort. Further, a reference, which anticipates any one of the above inventions, would neither anticipate nor make obvious of the other inventions. Each such invention is capable of supporting its own patent. For these reasons, the restriction requirement is proper.

To be complete, applicant's response must include a provisional election even though the requirement may be traverse.

The applicant is required to elect a single invention for examination purposes.
